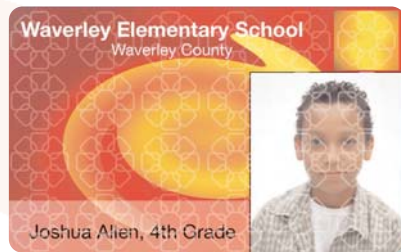

Photo ID systems

A flexible and cost effective photographic identification solution

Kalamazoo's professional photo ID system is an efficient and cost-effective solution for the design and production of full colour photo ID cards.

This card production facility enables the user to customise the fields for data entry, such as name, company name and photograph. This highly flexible design tool enables the user to produce fully branded ID cards quickly and easily.

Utilising the latest technology, the software also maintains a powerful personnel database, capturing or importing a vast amount of personnel information and images. The database enables the user to produce reports suiting a range of requirements.

Kalamazoo offer a range of thermal card printers from leading manufacturers. All printer types are available for both single and double-sided printing, full colour or monochrome print.

Cards can incorporate additional security features to help prevent unsolicited duplication and misuse, hence preventing unauthorised access to your building. These security features include hologram, guilloche backgrounds, invisible UV magnetic and smart card encoding.

Together, the photo ID software and thermal card printer provide a robust and reliable ID card printing solution. Kalamazoo can provide all printer consumables, including printer ribbons and cleaning kits to ensure the system maintains optimum functionality and durability.

Kalamazoo Secure Solutions Limited can also supply a wide range of identification accessories to complement your solution. Our ranges include, but are not limited to, customised lanyards, clips and wallets.

Secure solutions

Visitor management

Kalamazoo supplies a range of visitor management solutions to suit a diverse range of environments, budgets and requirements.

Manual passes

A secure and professional paper based solution for managing visitors.

Visitors complete their details onto a pass which simultaneously transfers all their details onto an integral register.

Full colour pass templates can be personalised to fit in with your brand and incorporate a range of additional security features, such as Timepass and CopyVoid.

VisitorNet

The front of house personnel can quickly and efficiently input visitor information and print fully customised visitor badges with this intuitive electronic system.

The solution builds a comprehensive database of visitor details and can run advanced reports such as instant fire lists, helping you meet stringent Health and Safety requirements.

The solution also has a range of optional modules including photo capture, electronic signature recognition and bar code reader.

VisitorNet MT

An enhanced version of the VisitorNet application, specifically designed for multi-tenanted buildings.

An electronic system which enables the main reception to quickly and efficiently input visitor information and print fully customisable visitor badges for multiple organisations. Numerous badge templates can be created and include a variety of corporate logos.

The solution builds a comprehensive database of visitor details and creates the ability to produce fully customisable reporting.

Card ID systems

Design and production of professional, full colour photo ID cards ideal for staff identification and access control.

Our solution enables organisations to produce high quality and durable ID cards quickly and easily. The layout of information is customisable according to specific requirements.

A range of additional security features can be applied including hologram, holodesign, guilloche backgrounds, invisible UV, magnetic and smart card encoding.

Accessories

Kalamazoo can also supply a wide range of identification accessories to complement your visitor management solution.

Our range of accessories include, but are not limited to, customised lanyards, clips and wallets. They are available in a variety of styles and colours to ensure they fit in with your corporate brand but also enable visitors, contractors and staff to be easily identified.
